MATH 4750/5750: Category Theory of Sets

I.   COURSE DESCRIPTION FROM CATALOG:
Abstracts sets and mappings, categories, sums, universal property, monomorphisms and parts, finite inverse limits, colimits, epimorphisms, the Axiom of Choice, mapping sets and exponentials, covariant and contravariant functoriality of function spaces, Cantor's diagonal argument, powers sets, variable sets, models of additional variation, selected applications. Lec. 3. Cr. 3.

II.   PREREQUISITE(S):
C or better in MATH 3400 (or consent of instructor for MATH 5750)

III. COURSE OBJECTIVE(S):
Advanced undergraduate or beginning graduate students need a unified foundation for their study of geometry, analysis, and algebra. This is an introductory course in category theory of abstract sets and mappings for mathematically advanced undergraduates and beginning graduate students in mathematics, computer science, physics, or computer engineering. Its purpose is to integrate a typical undergraduate experience of mathematics major in theoretical mathematics. Thus, the course can serve as an exit course for mathematics majors, or, as a preparatory course for further study and research in mathematics, computer science, or theoretical physics at the graduate level. Computer science students (if present) will be introduced to selected examples of applications of the category theory to computer science.

Graduate students will be assigned additional readings on more advanced topics and applications chosen from the references listed at the end. They will be asked to present these topics in class.

IV. STUDENT LEARNING OUTCOMES:
Upon successful completion of the course students will demonstrate a basic understanding of the concept of a category and the related notions of class, morphism, functor, natural transformation, and equivalence, as well as a basic understanding of fundamental constructions and properties in category theory, including direct limit, inverse limit, product, coproduct, the Hom-functor, universal property, covariant functor, contravariant functor, pullback, and pushout.

V.   TOPICS TO BE COVERED:

1   Abstract Sets and Mappings
    1.1 Sets, Mappings, and Composition
    1.2 Listings, Properties, and Elements
    1.3 Surjective and Injective Mappings
    1.4 Associativity and Categories
    1.5 Separators and the Empty Set

8   More on Power Sets (Optional)
    8.1 Images
    8.2 The Covariant Power Set Functor
    8.3 The Natural map $PX \qquad 2^{2X}$
    8.4 Measuring, Averaging, and Winning with V-Valued Quantities
    8.5 Additional Exercises

9   Introduction to Variable Sets (Optional)
    9.1 The Axiom of Infinity: Number Theory
    9.2 Recursion
    9.3 Arithmetic of N
    9.4 Additional Exercises

10   Models of Additional Variation (Optional)
    10.1   Monoids, Posets, and Grupoids
    10.2   Actions
    10.3   Reversible Graphs
    10.4   Chaotic Graphs
    10.5   Feedback and Control
    10.6   To and From Idempotents
    10.7   Additional Exercises

11   Selected Application and Examples from Computer Science (Optional, see [5] and references therein)
    11.1   Omega-Algebras
    11.2   Functional Programming Language (FPL) category
    11.3   Exponentiation, eval, and curry
    11.4   Functors: List, maplist.
    11.5   F-Algebras and F-homomorphisms
    11.6   Adjoints
    11.7   Cartesian Closed Categories
    11.8   Implicit Conversions and Generic Operators
    11.9   Programming Language Semantics
    11.10 Recursive Domain Equations

VI.   ADDITIONAL INFORMATION:

Recommended prerequisite: One or more of the following: MATH 3510, 3520, 4050/5050, 4110/4120, 5110/51120, 4530/4540, 5530/5540.

Graduate credit is earned on the basis of additional work that can be required by the instructor per TTU Graduate Catalog] Graduate students will be expected to present topics and applications in class.

The main body of the course consists of Chapters 1 − 5 from [1]. Chapters 7 − 10 from [1] can be covered in succession depending on the interests of students and the instructor.

Computer applications can be selected from [5] and references therein.

VIII. ANY TECHNOLOGY THAT MAY BE USED:

IX. STUDENT ACADEMIC MISCONDUCT POLICY:
Maintaining high standards of academic integrity in every class at Tennessee Tech is critical to the reputation of Tennessee Tech, its students, alumni, and the employers of Tennessee Tech graduates. The Student Academic Misconduct Policy describes the definitions of academic misconduct and policies and procedures for addressing Academic Misconduct at Tennessee Tech. For details, view the Tennessee Tech's Policy 217 – Student Academic Misconduct at Policy Central.

X. DISABILITY ACCOMMODATION:
Students with a disability requiring accommodations should contact the Office of Disability Services (ODS). An Accommodation Request (AR) should be completed as soon as possible, preferably by the end of the first week of the course. The ODS is located in the Roaden University Center, Room 112; phone 372-6119. For details, view the Tennessee Tech's Policy 340 – Services for Students with Disabilities at Policy Central.
