

The School of Environmental Studies
(SOES) presents the Spring

Seminar Series

Every other week this semester, there will be a seminar over an important topic in the field of environmental studies!

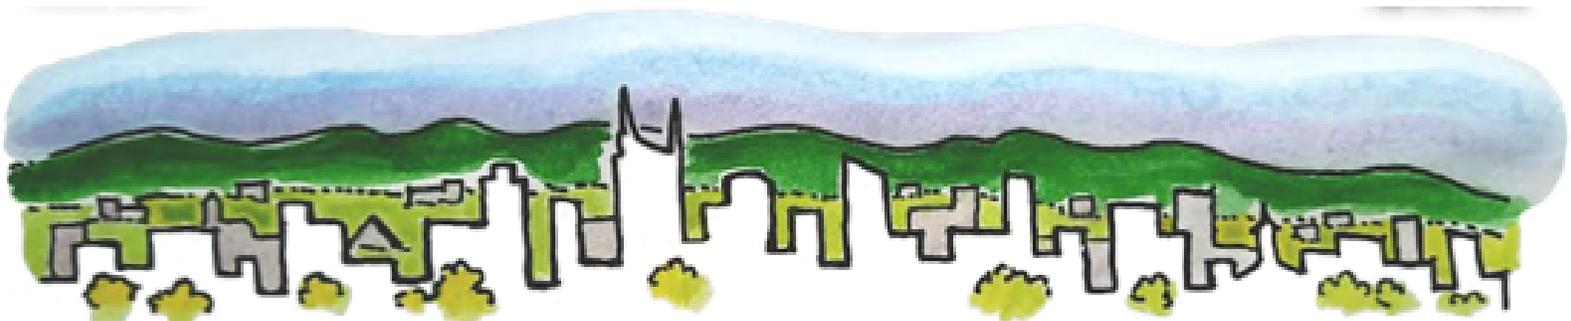

"Assessing Flood Risks and Modeling Flood Events within Nashville's Highland Rim Forest"

Seminar by **Creek Birchfield Anderson**

Monday, April 14th at 3 pm in LSC room 1201

Creek will be sharing work he's done with flood modeling and flood risk assessment within western Davidson County as it concerns Nashville's Highland Rim Forest and the parks within, as well as analyzing the impacts that urbanization has had on the region and why it is important to maintain this forest.

This internship and research was conducted with the Alliance to Conserve Nashville's Highland Rim Forest, which aims to gain recognition for the Western Highland Rim Forest in Davidson County as the "World's Largest Urban Forest". The goal is to conserve, protect, and educate people on the Nashville Highland Rim Forest.

Conserve Nashville's Highland Rim Forest
